22nd ANZAM OSCSM Symposium

Geopolitical Uncertainty and the Climate Crisis: What's the Role of the Supply Chain?

26–28 November 2025

The world is experiencing a multitude of crises that permeate national borders, from unresolved military conflicts that cause humanitarian emergencies to protectionist trade policies that pose threats to existing alliances. Meanwhile, ongoing climate change threatens biodiversity and causes natural disasters. As a result, organisations will need to reinvent their operations and supply chains to remain economically, environmentally, and socially sustainable.

We invite you to join this stimulating discussion at the **22nd ANZAM Operations, Supply Chain, and Services Management Symposium** in 2025, hosted by the **University of Melbourne**. In celebration of the 25th anniversary of the ANZAM OSCSM community, this year's symposium aims to cross disciplinary boundaries and includes voices from outside academia to understand the evolving role of operations and supply chain in a volatile global environment.
